

Abstract

Let's Watch is an online repository of various Television shows with details of each Television show in it. This project caters to the people who need organising and help track their watchlist. Let's Watch holds the details of a Television Show in a database which enables it to provide users access to it from anywhere around the world.

Using Let's Watch, users can browse through a list of Television shows, add them to their watchlist, keep track of other Television Shows, etc. The users can keep track of what Television Shows they are watching, and can also rate it after they complete watching the show. The rating is then reflected in the catalogue where different users can refer to it to help them choose the next show to binge on. The catalogue presents a list of available Television Shows which the user has not watched.

The admins of Let's Watch are responsible to add new Television Shows to update the database. They can add and edit the Television Shows anytime on Let's Watch. They are responsible to add Actors and Creators of different Television Shows too. They have the privilege of promoting existing users to admins of Let's Watch.

Let's Watch provides a clean and user-friendly interface to help users manage their watchlist. Let's Watch aims to help users, all around the globe, manage their watchlist and help them find the next Television show to binge on.
